HardyCHROM™

HardyCHROM™ SS

A Comparison to HE Agar

	HardyCHROM™ SS	Hektoen Enteric Agar (HE)
Uses chromogenic technology	☑	
Selects for *Salmonella*	☑	☑
Selects for *Shigella*	☑	☑
Growth in 24 hours	☑	☑
Highly specific – reduces false positives	☑	
Eliminates need for most sub-culturing	☑	
Eliminates most false positives due to *Proteus*, *Morganella*, *Citrobacter*, and weak lactose fermentors	☑	
Less need for TSI, LIA, and Urea slants	☑	
Less need for API™, Vitek™, or MicroScan™ identifications	☑	
Colonies can be directly transferred to Vitek™, Trek™, API™, or MicroScan™ for confirmation and speciation of *Salmonella* and *Shigella*	☑	☑
Reduces ID time by one day in most cases	☑	
Less time wasted on identifying false positives	☑	
Less money spent in identifying false positives	☑	
Unique patented chromogenic technology only from Hardy Diagnostics	☑
